

Saskatoon Telehandler Certification

Saskatoon Telehandler Certification - Telehandler certification courses are both for operators who have some experience driving a typical forklift and for individuals with no experience. The real-world training offered by these programs produces graduates well versed in the safe and proper utilization of these kinds of machinery.

Telehandler certification courses are provided in two forms: at a training facility; at the trainee's job site. With the former option, the manufacturer may work along with a licensing agency to bring individuals to a training facility. This option offers those training with the chance to learn to utilize the machinery in a controlled setting. When completed, participants are given a certification or license to operate this kind of machinery.

With the latter option, a trained instructor is sent to a work site to provide on-location training. This option ensures that the trainee is instructed on actual equipment that will be used on the job, and prepares the trainee for the demands of that particular setting. Trainees learn about possible dangerous situations which can occur on the actual work location. The instruction focuses on any situation which are specific to the work site, enabling operators to be ready to safely handle these elements.

The word "telehandler" is an abbreviated version of "telescopic handler," meaning an equipment that has a telescoping or extending arm supporting a fork. A telehandler has different characteristics and controls similar to a forklift. A telehandler has the capability of lifting and transporting loads up and away from the vehicle. Incorrect operation of telehandlers can lead to serious accidents. If load limitations are exceeded, the equipment can tip due to excess weight on the lift. It is an operator's duty to know load restrictions and to utilize these machinery safely.

Telehandler courses designed for operators who are already certified to utilize a forklift are referred to as "conversion" classes. These classes teach the differences between forklifts and telehandlers, and avoid repeating information that forklift operators already know. For trainees who have no past experience using telehandler machines, training consists of the basic use and operation of the equipment. Some organizations also offer refresher courses.
